

North Tyneside Surface Water and Drainage Partnership Terms of Reference and Membership

The Partnership aims to secure the following outcomes

Visible Partnership and Accountability

The Council and its partners need to be seen to work together and to be accountable for their performance in this area. North Tyneside residents and businesses need to understand who is acting on their behalf and what responsibilities those organisations have.

Visible Preparation and Management

The residents, communities and businesses of North Tyneside need to be able to see that the Council and its partners play their appropriate part in preparing for flooding and managing surface water in a manner that mitigates the risks of pluvial flooding. North Tyneside residents and businesses need to see that the Council and partners take flooding seriously and work hard to mitigate the risks.

Community Awareness and Resilience

The Council and its partners, especially the Community and Voluntary Sector need to work together to help residents, communities and businesses understand the risks, the intelligence available to them and what they can do to be resilient to flooding. North Tyneside residents and businesses need to feel they know how to cope.

Understood Response Priorities

The Council and other Category One Responders under the Civil Contingencies Act 2004 have clear response priorities. For the Council that is the protection of the elderly and the vulnerable. It is clear that is sometimes at odds with other partners' priorities which might be to open the road network for example. North Tyneside residents and businesses need to understand the priorities in a response situation and act accordingly.

The Partnership is responsible for the Local Flood Risk Management strategy comprising

- The Development Plan
- The Implementation Plan
- The Surface Water Management Plan

These are to be reviewed and revised annually: Reported publicly, to include North Tyneside Council's Cabinet.
